# BRAUN UVL® SERIES

The Braun UVL, or "Under Vehicle Lift," has emerged as the premier commercial wheelchair lift series for those seeking ADA compliance along with maximum ambulatory seating. Offered as an alternative to platform-style lifts, the UVL retracts into a weathertight enclosure and remains out of your way until needed.

The lift may be installed in your existing step configuration or in dedicated door applications. With a number of different models capable of several floor-to-ground heights, there is a UVL designed to fit your needs.

## Advantages

- The lift is mounted out of sight and out of the way providing more flexibility in floor plan design
- Rattle-free environment inside, providing a pleasant, quiet ride
- Custom inboard roll stops/bridge plates are incorporated to meet a variety of door and stepwell requirements

## Safety Features

- Lift will not raise with the Automatic Roll Stop in the down position
- Lift will not stow with weight on the platform
- Manual backup system incorporated for emergency situations

## Braun-Built

- Lift housing is made of high strength corrosion-resistant aluminum
- Electrically actuated automatic roll stop
- Slip-resistant platform surface
- Hand-held four button pendant control
- Lift is fully enclosed and protected from the weather
- Bearings are sealed or self-lubricating
- All functions operate from a digital logic board located inside the power pack
- Digital diagnostic system incorporated for easy troubleshooting
- Remotely mounted electrical hydraulic power pack
- Single-acting cylinder with power-up and gravity-down operation

The hand-held control makes lift operation simple and straightforward.

The UVL Series features a wide range of models designed for installation in stepwells and dedicated lift doors, both in buses and vans. Your Braun dealer will work closely with you to select the right model for your application.

An interlocked belt system is offered on certain models. The lift cannot be raised or lowered without the belt securely fastened – another example of Braun's concern for your passengers' safety.

All UVL models feature a manual backup system should the vehicle lose electrical power. The hydraulic hand pump makes it easy to unload passengers and stow the platform.
